

# **1 APR - Perl Interface for libapr and libaprutil Libraries**

## 1.1 Synopsis

```
use APR;
```

## 1.2 Description

Normally you don't need to use this module. However if you are using an `APR::` package outside of `mod_perl`, you need to load `APR` first. For example:

```
% perl -MApache2 -MAPR -MAPR::UUID -le 'print APR::UUID->new->format'
```
